

# WANTED

## Participants for Virtual Reality User Study

<b>Reward</b>	There may be chocolates
<b>Duration</b>	~1 hour per session
<b>Dates</b>	14.12.2022 – 23.12.2022
<b>Topic</b>	Effects of limited FoV on user behaviour in VR
<b>Location</b>	ETH Zürich CLA – A Floor Tannenstrasse 3 8092 Zürich
<b>Registration</b>	Scan the QR code to sign up

<https://tinyurl.com/5ajxd3hx>

### Description

In this study you will complete guided tasks, where you will be looking at different focus cards in three different test environments (reality, reality with limited FoV and virtual reality). For the reality-based tests you will be wearing a headset with a tracker for head position and orientation, as well as a FoV restriction device for the restricted FoV reality test, while for the VR-based test you will be using the HTC VIVE Pro HMD.

One user study session takes roughly one hour after which you may be rewarded with chocolate. You may only participate once. All data is collected anonymously. Previous knowledge is not required.

### Participation Criteria

If you are wearing glasses, please make sure to bring contact lenses for the user study.
